

Artifact Abstract

This artifact accompanies the paper titled “Stealth BGP Hijacks with uRPF Filtering”. The core idea of the artifact is to provide a reproducible implementation of the key contributions described in the paper. The artifact primarily focuses on public availability. It can be accessed via the following link: <https://github.com/zsjstart/Stealthy-uRPF-Attack/tree/v1.1.0>. The repository includes the source code and data necessary to reproduce the results, along with a README.md file that references the paper. It is released under the MIT License, which permits use for research and comparison purposes.

Reviewers are expected to verify that the artifact is publicly available and accessible at the provided link, and to check that it includes the necessary source code and datasets to support the claims made in the paper.
